1. The following is an examiner's statement of reasons for allowance: the prior art does not disclose the utilization of a line detector for detection of single-frequency noise sources on the different signals, for correcting and providing accepted data; pattern comparison of all bits in order to determine a signature which is characterising for time and Doppler shift; warning to a central unit via a network interface when a sufficient volume of accepted data has been processed and is ready for further processing in the central unit as recited in claim 1.

The prior art does not disclose the utilization of at least one central unit for acquisition and interpretation of processed data from detector base units via the network connection, and where the data volume transmitted from the detector base units to the central unit(s) is reduced to a minimum since signal noise and non-essential signal components are substantially removed from the signals by means of signal processing in the detector base unit before transmission of the signals to the central unit(s) as recited in claim 10.

The prior art does not disclose the utilization of differentiating filtering as a function of time for reduction of single-frequency noise sources on the different signals, in order to obtain accepted data; pattern comparison of all bits in order to determine a signature which is characterising for time and Doppler shift as recited in claim 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
